

Sant Gadge Baba Amravati University, Amravati

Faculty of Science & Technology

Master in Computer Application  
(Three Year Degree Course.... Semester Pattern )

(2019)

## MCA -3 Years

### Semester III

<b>Course Code</b>	<b>MCA19201</b>
<b>Course Name</b>	<b>Java Programming</b>
<b>Credits</b>	<b>4</b>

#### **Course Outcomes**

1. Remember and know the use an integrated development environment to write, compile, run, and test simple Java programs and get knowledge of the structure and model of the Java programming language.
2. Understand Java as an Object oriented language and write programs that solve real-world problems.
3. Understand exception handling and multithreading in Java and apply the concepts to real problems
4. Understand Streams in Java and apply them to File handling, understand Generics
5. Understand Collection Frameworks and apply it for problem solving, design simple GUI based applications using Swing
6. Understand Event handling and analyze and apply the knowledge to develop small GUI based applications.

<b>Units</b>	<b>Contents</b>	<b>Total Hrs</b>
I	<b>Java Basics:</b> Program Components, Compilation cycle. Data types and Variables, Operators: Arithmetic, relational, Assignment, Shift operators. Control structures: if, nested if, switch ,while, do-while, for loop, Enhanced for loops.	9
II	<b>Concepts of OOP:</b> Introduction to classes, class fundamentals, declaring objects, methods, constructor, <b>this</b> keyword, access control, Inheritance, Polymorphism, Abstract classes and Interfaces, Packages String and String Buffer classes, Math class. Arrays: Basics, One - & Multi-dimensional, Array of Objects, Passing array to methods.	10
III	<b>Exception handling:</b> Exception types, Built-in Exceptions, checked and unchecked Exceptions, using try and catch, throw, throws, finally clauses, multiple catch clauses, <b>Multithreaded programming:</b> Java thread model, creating a thread, creating multiple threads, thread priorities & synchronization.	9
IV	<b>Java I/O:</b> Stream classes, Byte Stream & Character Streams: Input stream, Output stream, File Input stream, File Output stream, Data Input stream, Data Output stream, PrintWriter. <b>Generic Programming:</b> Motivation for generic programming, generic classes, generic methods, inheritance and generics, Restrictions on Generics	9
V	<b>Java Collections Framework:</b> Introduction, Collections Framework hierarchy, List, Set, Map Interface and their implementing classes and methods ,Iterator/ ListIterator, Utility classes. <b>Introduction To Swing:</b> Swing Features, Hierarchy Of Java Swing Classes, Swing GUI Components, Packages Used In Swing, Swing Control Classes & Methods, Swing API.	10
VI	<b>Event handling:</b> Event handling mechanisms, Delegation Event model, Event sources & EventListeners, Event Classes, Event Listener Interfaces.Using delegation Event model, Handling mouse events, handling Keyboard events, Adapter classes, Inner classes, anonymous inner classes.	9

#### **TEXT BOOK:**

- 1) Herbert Schildt: Java The Complete Reference, Ninth Edition McGraw Hill

#### **REFERENCES BOOKS:**

- 1) Core Java, Volume I — Fundamentals (9th Edition), Cay S.Horstmann, Gary Cornell,
- 2) PrenticeHall
- 3) Effective Java, Second Edition, Joshua Bloch, Addison-Wesley Educational Publishers Inc

<b>Course Code</b>	<b>MCA19202</b>
<b>Course Name</b>	<b>Data Communication Network</b>
<b>Total Credits</b>	<b>4</b>

#### Course Outcomes

1. Understand the concepts of Data Communication System and its components.
2. Learn various types of network topologies and their appropriateness for designing a network.
3. Understand the various standard models of networking. Acquire deeper understanding about service implementation of various protocols used during network communication.
4. Understand roles and importance of different network devices within a network.
5. Recognize the technological trends of Computer Networking.
6. Acquire introductory knowledge about digital wireless communications systems.

<b>Units</b>	<b>Contents</b>	<b>Total Hrs</b>
I	<b>UNIT-I: Data Communication:</b> Advantages, Basic Model of Communication System; <b>Data Transmission: Modes:</b> Simplex, Half Duplex, Full Duplex; <b>Methods/Types:</b> Parallel, Serial: Asynchronous, Synchronous, Isochronous; <b>Transmission Media:</b> Guided and Unguided; <b>Modulation:</b> Amplitude, Phase Shift, Frequency, PAM, PCM; <b>Multiplexing:</b> FDM, WDM, TDM; <b>Switching:</b> Circuit, Message, Packet; Delays in Packet Switched Network, Packet Loss; Telephone Networks, Network topologies, Types of Networks: LAN, MAN, WAN; <b>Network Reference Models:</b> ISO-OSI model, TCP/IP model	10
II	<b>UNIT-II: Application Layer:</b> Services; <b>Processes:</b> Client-Server Model, Socket Interface; Services required by Application Layer; <b>HTTP:</b> Introduction, RTT, HTTP Handshake, types of HTTP Connections, HTTP Messages, Authentication and Cookies; <b>FTP:</b> Service Model, FTP Commands; Electronic Mail; SMTP; <b>DNS:</b> Services and working	09
III	<b>UNIT-III: Transport Layer:</b> Services; Multiplexing and Demultiplexing Applications; Connectionless Transport – UDP; Principles of Reliable of Data Transfer (RDT); Stop-and-wait and Pipelined protocols; GBN protocol; Connection-Oriented Transport: TCP; Flow Control; Principles of Congestion Control; Approaches towards Congestion Control; TCP Congestion Control	10
IV	<b>UNIT-IV: Network Layer:</b> Services; Network Service Model: Datagram, Virtual Circuit; Routing Principles; Routing Algorithms: Classifications; Hierarchical Routing; Internet Protocol: IP Addressing, IPv4: Classes and Packet format, DHCP; ICMP; Routing in the Internet: RIP, OSPF, BGP; Router; IPv6; Multicast Routing.	9
V	<b>UNIT-V: Data Link Layer:</b> Services; Error Detection and Correction; Multiple Access Protocols in LANs: ALOHA, CSMA/CD; LAN Addresses and ARP; Ethernet; Hubs, Bridges and Switches; Point-to-Point Protocol.	9
VI	<b>UNIT-VI: Wireless Communication:</b> Advantages, Applications; <b>Signals:</b> Characteristics, Propagation, Fading, Multipath Propagation; Spread Spectrum; Frequency Reuse Principle, Cellular System; Medium Access Control: SDMA, FDMA, TDMA, CDMA; Wireless LAN: IEEE 802.11; Bluetooth.	9

#### Reference Books:

- 1) Computer Networking – James F. Kurose and Keith W. Ross (Pearson)
- 2) Data Communication and Networking – Behrouz A. Forouzan (McGraw Hill)
- 3) Computer Network & Internet - Douglas E. Comer (Pearson)
- 4) Data and Computer Communication – William Stallings (Pearson)
- 5) Computer Networks - Andrew S. Tanenbaum (PHI)
- 6) Mobile Communications - Jochen Schiller (Addison-Wesley)

**Course Code**      **MCA19203**  
**Course Name**      **Design and Analysis of Algorithms**  
**Credits**            **4**

**Course Outcomes**

1. Understand the factors that affect the efficiency of algorithms and analyze the performance of algorithms.
2. Learn and Understand variety of divide and conquer algorithms, analyze them and apply ideas to new situations.
3. Learn and Understand variety of greedy algorithms, find out the basic ingredients of a greedy algorithm, and how to approach arguing the correctness of such algorithms.
4. Understand and Apply variety of dynamic programming algorithms.
5. Understand and solve variety of backtracking algorithms.
6. Analyze time and space complexity

Units	Contents	Total Hrs
I	<b>Iterative Algorithm Design Issue:</b> Introduction, Use of Loops, Efficiency of Algorithms, Estimating & Specifying Execution Times, Order Notations, Algorithm Strategies, Design using Recursion	10
II	<b>Divide And Conquer:</b> Introduction, The general method, Binary Search, Finding minimum and maximum, merge sort, quick sort, selection sort, Strassen's matrix multiplication.	9
III	<b>Greedy Methods:</b> Introduction, Knapsack Problem, Job sequencing with deadlines, Minimum Spanning Trees, Prim's Algorithms, Kruskal's Algorithm, Dijkstra's Shortest Path Algorithm.	9
IV	<b>Dynamic Programming:</b> Introduction, Multistage Graphs, Traveling Salesman, Matrix multiplication, Longest Common Sub-Sequences, Optimal Polygon Triangulation, Single Source Shortest Paths.	10
V	<b>Backtracking:</b> Combinational Search, Search & Traversal, Backtracking Strategy, Backtracking Framework, Some typical State Spaces.	9
VI	<b>Efficiency of Algorithm:</b> Polynomial Time & Non Polynomial Time Algorithms, Worst and Average case Behavior, Time Analysis of Algorithm, Efficiency of Recursion, Complexity, Examples of Complexity Calculation for Various Sorting algorithms. Time-Space Trade off	9

**Text Books:**

- 1) "Design and Analysis of Algorithms", Dave and Dave:, Pearson Education

**Reference Books:**

- 1) Fundamentals of computer Algorithms, E.Horowitz & S.S.Sahani. (Galgotia).
- 2) .Aho, Hopcroft & Ullman "The Design & Analysis of Computer Algorithms", Addison-Wesley
- 3) G.Brassard, P.Bratley: Fundamentals of Algorithmics", PHI

**Course Code**        **MCA19204**  
**Course Name**        **MIS Framework and Implementation**  
**Credits**                **4**

**Course Outcomes**

1. Ability recognize role of Management Information System in industry.
2. Evaluate the role of information systems in today's competitive business environment.
3. Assess the relationship between organizations, information systems and business processes, including the processes for customer relationship management and supply chain management.
4. Analyze the relationship between information systems and organizations. Evaluate the role of information systems in supporting various levels of business strategy
5. Understand and apply technology in Management Information System
6. Learn relevance of IT, MIS & BPR

Units	Contents	Total Hrs
I	<b>The meaning &amp; role of MIS:</b> What is MIS? MIS & Computers, Decision Support System, MIS support to management, Role & importance of management. The system view of business MIS organization within the company, manager's view of information system.	10
II	<b>Basics of MIS :</b> MIS & decision making concept, information concept & classification, method of data & information collection, value of information management & organizational behaviours, management , information & the system approach. Development of MIS choice of IT.	9
III	<b>Strategic &amp; project planning for MIS:</b> general business planning, appropriate MIS response, MIS planning MIS planning details. Implementation, evaluation & maintenance of the MIS.	9
IV	Application of information system to business MIS application in service industries & role of MIS in source industries. <b>DSS:-</b> concepts & philosophy, deterministic systems & knowledge based expert system MIS & role of DSS.	10
V	<b>Technology in MIS:</b> - Data processing, transaction processing, application processing, information system processing, DBMS, Client-server architecture & MIS. <b>MIS &amp; data warehouse:</b> - Architecture management & implementation of data warehousing, E-business Model, E-payment, security in E-business, MIS & E-business.	9
VI	<b>MIS &amp; Network:-</b> Network technology, LAN, Data communication, ATM Technology, Introduction of business processing, process model of organization, value system model, relevance of IT, MIS & BPR.	9

**Text Books**

- 1) W.S. Jawadkar: Management Information System (II Edition), TMH
- 2) R.G. Murdick, J.E. Ross & J.R. Clagget: Information systems for modern management, 3rd edition, PHI

**Reference Books:-**

- 1) Kenneth C. Landan & J.P. Landan: Management Information System, 8<sup>th</sup> edition, Pearson education
- 2) Robert Schuithesis, Mary Sumner: Management Information System, 4<sup>th</sup> edition, PHI
- 3) Laudon & Laudon, V.M. Prasad: Management Information System, 9<sup>th</sup> edition, Pearson education

**Course Code**      **MCA19204**

**Course Name**     **Managerial Economics**

**Credits**            **4**

**Course Outcomes**

1. Acquaint with concepts and techniques used in Micro-Economics and to enable their application
2. Acquire knowledge in business decision making .
3. Develop an understanding of the applications of managerial economics.
4. Interpret regression analysis and discuss why it's employed in decision-making.
5. Understand optimization and utility including consumer behavior.
6. Evaluate the relationships between short-run and long-run costs.
7. Understand uniform pricing and how it relates to price discrimination and total revenue.

<b>Units</b>	<b>Contents</b>	<b>Total Hrs</b>
I	Concept, Need, Scope, Techniques and Applications of Managerial Economics.	9
II	Utility Analysis, Marshal Approach, Demand Analysis, Demand Function, Law of Demand, Elasticity of Demand and demand forecasting. Law of Supply and Supply Analysis	10
III	Production & Cost function, Production Iso-quant, Iso-cost, Expansion path, Economies and Diseconomies of scale, short run and long run cost behavior	9
IV	Theories of firm, Profit Maximization, Sales Maximization, Managerial Utility Model, Simon Satisfying Behaviour Model	10
V	Market Structure-Perfect Competition, Monopoly, Oligopoly, Monopolistic Competition, short term pricing in these market structure.	9
VI	Cost Sheet, Costing for decision making, Relevant Costing. Marginal Costing & Absorption costing.	9

**Text Books**

**Course Code**      **MCA19204**

**Course Name**      **Object Oriented Analysis and Design**

**Credits**            **4**

**Course Outcomes**

After completing this course students will be able to:

1. Understand the issues involved in implementing an object-oriented design
2. Analyze requirements and produce an initial design.
3. Develop the design to the point where it is ready for implementation.
4. Design components to maximize their reuse.
5. Learn to use the essential modeling elements in the most recent release of the Unified Modeling Language

Units	Contents	Total Hrs
I	<b>Introduction</b> Two views of software Developments: SSAD and OOAD. Why Object–Orientation? <b>The Object Paradigm</b> Object andclasses, Abstraction and encapsulation, Methods and Message, Interfaces, Inheritance andPolymorphism , AccessControl	9
II	<b>Introduction to UML &amp; Modeling</b> Review of the object Oriented Methodologies by BoochRumbaugh, Cood Yourdon, IvarJacobson Unified ApproachDiagramming and Notational Techniques using theUML. UML Diagrams and software DevelopmentPhases	10
III	<b>Object-Oriented Systems Development Process</b> Rational UnifiedProcess : Four Major phases, Inception Elaboration, Construction,Transition. RequirementsEngineering Problem analysis - Understanding Stockholdersneed	9
IV	<b>Structural Modeling</b> Common Structural Modeling Techniques – Approaches to find classes. Modeling Structural Elements : Classes, Relationships, Interfaces , Packages, Class Diagrams, Difference between ERD & Class Diagram, Object Diagram. <b>Behavioral Modeling</b> Common Behavioral Modeling Techniques, Interactions. Use Cases and Use Case Diagrams Interaction Diagrams : Sequence Diagrams, Collaboration Diagrams , Activity Diagrams, State chart Diagram, Forward & Reverse Engineering	10
V	<b>Persistent Object and Database Issues:</b> The Codd Data Management Domain. Object Persistence, Object-oriented Database Management System, Object- Oriented verses Relational Database. Mapping object to Relational Data structure.	9
VI	<b>Testing of Object Oriented applications:</b> Introduction to Testing Strategies Impact of Object Orientation on Testing. Testing Business Process. Patterns, Benefits of patterns.Using patterns During Analysis. Using Pattern During Design	9

**Text Books:**

- 1) Object Oriented Analysis and Design with Applications by Grady Booch., Benjamin / Cummings , 1994., PearsonPub.
- 2) Object–OrientedModelingandDesignbyJRumbaugh,MBIaha,W.Premarlani,PHIPub.

**Reference Books**

- 1) Magnifying Object Oriented Analysis and Design by Arpita Gopal and Netra Patil : PHI Publication
- 2) Principles of Object- Oriented Software Development - Anton Eliens , Addison Wesley.
- 3) Object Oriented System Development - Ali BahramiMcGRAW-HILL InternationalEdition.
- 4) Object-Oriented Software Engineering - Ivar Jacobson Pearson EducationINC
- 5) Applying UML And Pattern by Craig Larman Pearson EducationINC
- 6) UML Distilled Martin Fowler - Pearson Education INC
- 7) The Unified Modeling Language User Guide -Grady Booch, James Rumbaugh, Ivar Jacobson-

- Pearson EducationINC
- 8) The Unified Modeling Language Reference Guide -Grady Booch, James Rumbaugh, Ivar Jacobson- Pearson EducationINC
  - 9) DesignObject-OrientedSoftware-RebeceaWrifs-Brock.BrianWilkerson,LaurenWiener
  - 10) Object Oriented Analysis and Design- Bennett , Simon McGrawHill.
  - 11) Designing Flexible Object Oriented System with UML - Charless Richter,Techmedia
  - 12) Instant UML – Muller – ApressLP
  - 13) UML Instant – Thomas A Pendar – WileyPublication
  - 14) UML in Nutshell ,O'reillyPub.
  - 15) **Note:** The Subject should be taught through **case study approach**. The **focus should be on various UML diagrams**

**Course Code**        **MCA19206**

**Course Name**        **Lab 7 Based on Java**

**Credits**                **01**

**Course Outcomes**   **Ability to Apply core concepts of Java for problem solving .**

The sample list of programs is given below. This list can be used as a guideline but the scope of the laboratory should not be limited to the same. Aim of the list is to inform about minimum expected outcomes.

1. Write, debug and execute simple JAVA programs that demonstrate programming logic by making use of various control statements.
2. Programs to Demonstrate the understanding and application of classes and objects to real world problems
3. Programs that Demonstrate the understanding and application of interfaces.
4. Programs to Demonstrate the understanding of built in and user defined packages
5. Programs that Demonstrate the understanding and application ofException handling using real world problems
6. Programs that Demonstrate the understanding and application of Multi-threading using Thread Class/Runnable Interface
7. Programs that Demonstrate the understanding and application of synchronization using multi-threading.
8. Programs that Demonstrate use of streams for File handling,
9. Programs to Demonstrate the use and benefits of generic classes, generic methods, , inheritance
10. Programs that Demonstrate the use offew Collection classes with real world problems
11. Programs that Demonstrate the use of Swing Control Classes & Methods in GUI application development
12. Programs that Demonstrate the use of Delegation Event model and benefits of Inner classes, and anonymous inner classes.

**Course Code**        **MCA19207**

**Course Name**        **Lab 8 Based on DAA**

**Credits**                **01**

**Total Hrs:**            **15**

**Course Outcomes**   Identify and apply the appropriate algorithm to a given real world problem.

The sample list of programs is given below. This list can be used as a guideline but the scope of the laboratory should not be limited to the same. Aim of the list is to inform about minimum expected outcomes.

- 1) Write a program to perform binary search using the divide and conquer method.
- 2) Write a program to find out maximum and minimum using divide and conquer rule.
- 3) Write a program to implement merge sort using divide and conquer approach.
- 4) Write a program to implement quick sort using divide and conquer approach.

- 5) Write a program to implement selection sort using divide and conquer approach.
- 6) Write a program to solve knapsack problem using Greedy method.
- 7) Write a program to implement Greedy Algorithm for Job Sequencing With Deadlines
- 8) Write a program to implement prim's algorithm using greedy method.
- 9) Write a program to implement Kruskal algorithm using greedy method.
- 10) Write a program to implement Dijkstra's algorithm for the Single source shortest path problem.
- 11) Write a program to implement Traveling Salesman problem using dynamic programming algorithm.
- 12) Write a program to Program to implement All Pairs Shortest Path using dynamic programming.
- 13) Write a Program to implement graph traversal using Breadth First Search.
- 14) Write a Program to implement graph traversal using Depth First Search.
- 15) Write a Program to implement 8 queen's problem.

**Text Books:**

- 1) "Design and Analysis of Algorithms" , Dave and Dave:,Pearson Education
- 2) Fundamentals of computer Algorithms, E.Horowitz&S.S.Sahani. (Galgotia).

**Course Code**        **MCA19208**

**Course Name**        **Lab 9 Based on Software Testing**

**Credits**                **02**

**Total Hrs: 30**

**Course Outcomes**

1. Analyze requirements to determine appropriate testing strategies
2. Apply a wide variety of testing techniques and tools in an effective and efficient manner
3. Compute test coverage and yield according to a variety of criteria
4. Evaluate the limitation of given testing process and provide a succinct summary of those limitations

**UNIT-I**

**Introduction:** Software-Testing, Terminology and Methodology, Verification and Validation. **Dynamic Testing:** Black Box Testing Techniques, White Box Testing Techniques, Static Testing, Validation Activities, Regression Testing.

**UNIT-II**

Test Management, Software Metrics, Testing Metrics for Monitoring and Controlling the Testing Process, Efficient Test Suite Management. Testing Object Oriented Software, Testing Web Based Systems, Debugging.

**UNIT-III**

Overview of Testing Tools, Testing an Application using WinRunner, Test ScriptLanguage,Architecture and use of Silk Test, Use of LoadRunner and JMeter, Source Code Testing Utilities in Unix / Unix Environment.

**Suggested Reading:**

- 1) Naresh Chauhan, **Software Testing Principles and Practices**, Oxford University Press, 2010.
- 2) Dr. K.V.K.K.Prasad, **Software Testing Tools**, Dreamtech press, 2008.
- 3) William E. Perry, **Effective Methods for Software Testing**, Third Edition, Wiley & Sons, 2006.
- 4) Srinivasan Desikan, Gopalaswamy Ramesh, **Software Testing: Principles and Practices**,
- 5) Pearson Education, 2006.

## Semester IV

**Course Code**    MCA19210  
**Course Name:** Client Server Computing  
**Credits**         4

### Course Outcomes:

After completion of this course, student will be able to :

1. Acquire knowledge of Server Side programming by implementing Servlet and JSP.
2. Acquire the knowledge of J2EE architecture, MVC Architecture.
3. Distinguish Web Server, Web Container and Application Server, Serialization, Internationalization
4. Understand and write the deployment descriptor and enterprise application deployment.
5. Design and implement components like: Session, Java Beans, JSTL, Tag Extension and Filter.
6. Gain knowledge of frameworks such as Struts Architecture and Hibernate Architecture
7. Distinguish JDBC and Hibernate. Design and Develop various application by Integrating any of Servlets, JSPs, Database, Struts, Hibernate after analyzing requirements and evaluating existing system.

**Pre-requisite of course: Core Java**

Units	Contents	Total Hrs
I	<b>Java Database Connectivity:</b> JDBC Concepts, JDBC API, Driver Manager, Connection, Statement, PreparedStatement, CallableStatement and ResultSet classes with relevant methods, Types of ResultSets. Handling queries, inserts, deletes and updates to database. Displaying the query results. Stored Procedures.	10
II	<b>Servlets in Java:</b> Servlet structure & lifecycle. Servlet A P I basics, various classes & interfaces. Servlet requirements, writing. Running of Servlets, Concepts of Cookies, Servlets & cookies. Session management with Servlet API. Server side includes and request forwarding. Servlet chaining. Jdbc Servlets	9
III	<b>Introduction to JSP:</b> Simple JSP concepts, Environment set up for JSP, Life cycle of a JSP, Elements involved with development of JSP: Scripting Elements, Directives, Implicit Objects. Java beans: Concept of Beans, Properties, Bean instances & serialization, Bean Scopes, Writing Beans, Deploying a bean, JDBC bean. Jsp Actions, Using a bean in a JSP. Java Standard Tag Library (JSTL/Advanced JSP): Types of tags, core and SQL tags in detail.	9
IV	<b>Introduction to Javascript:</b> What is Javascript?, Values, Types and Operators, Expressions and statements, control flow statements, Functions, Arrow Functions, HTTP and Forms, Event handling, data structures, objects	10
V	<b>Introduction to Hibernate:</b> Why Hibernate?, Architecture of Hibernate, Hibernate Query language, Hibernate O/R Mapping, Setting up the Development Environment, Creating Database Table, Writing-> Hibernate Configuration File, JavaBean, and Hibernate Mapping File, Developing Controller Component, Developing view Component.	9
VI	<b>Introduction to Struts:</b> Explaining MVC 2 Design Pattern for Struts 2, The Need for Struts 2, Processing Request in Struts 2, Struts 2 Architecture, Actions in Struts 2, Interceptors, OGNL Support, Performing Validation in Struts 2, Internationalizing Struts 2 Applications, Implementing Plugins in Struts 2, Integrating Struts 2 with Hibernate	9

### Text Books :

- 1) 1 Java Server Programming Java EE 7 (J2EE 1.7) Black Book (2014), Kogent Learning Solutions Inc.
- 2) Core Servlets and Java Server Pages: Core Technologies by Marty Hall and Larry Brown, Java 2 Platform Enterprise Edition series, Prentice Hall

### Reference Books

- 1) 1 Java EE cookbook, Elder Moraes, Packt Publishing Limited (9 April 2018)

### Reference URLs:

**Course Code** MCA19211  
**Course Name:** ARTIFICIAL INTELLIGENCE AND APPLICATIONS  
**Credits** 4  
**Course Outcomes:**

1. Adopt an approach in view of Problem solving with AI.
2. Identify and apply suitable 'Intelligent Agents for various AI applications.
3. Identify knowledge statement and represent it.
4. Empower students for path planning of a robotic system.
5. To develop and survey embedded systems applications using machine learning.

Units	Contents	Total Hrs
I	<b>Introduction to Artificial Intelligence:</b> What is an AI, Introduction of Intelligent systems, The Foundations of Artificial Intelligence, Applications of A.I. Problem solving with AI, AI models, <b>Intelligent Agents:</b> Agents and Environments, Good Behavior: The Concept of Rationality, The Nature of Environments, The Structure of Agents, How the components of agent programs work.	10
II	<b>Knowledge, Reasoning, and Planning:</b> Knowledge based agents, The Wumpus World, Logic, propositional logic, Representation of knowledge using rules, Predicate logic, Unification and lifting, inference in FOL, Forward Chaining, Backward Chaining, Resolution, Logic Programming. Planning problem, Planning, Algorithms for Planning as State-Space Search, Planning Graphs, simple planning agent, planning languages, blocks world problem, goal stack planning.	9
III	<b>Logical Agents:</b> Knowledge representation structures: Frames, semantic net, Scripts, Logic: Propositional Logic, Propositional Theorem Proving, Inference and proofs, Proof by resolution, Conjunctive normal form, Horn clauses and definite clauses, Syntax and Semantics of First-Order Logic, Symbols and interpretations, Knowledge Engineering in First-Order Logic, Unification, Resolution, and Introduction to logic programming (PROLOG).	9
IV	<b>Problem Decomposition and Planning:</b> Problem Decomposition: Goal Trees, Rule Based Systems, Rule Based Expert Systems. Planning: STRIPS, Forward and Backward State Space Planning, Goal Stack Planning, Plan Space Planning, A Unified Framework for Planning. Constraint Satisfaction : N-Queens, Constraint Propagation, Scene Labeling, Higher order and Directional Consistencies, Backtracking and Look ahead Strategies.	10
V	<b>Natural Language Processing and Robotics:</b> <b>Natural Language Processing:</b> Language Models, Steps in NLP, Syntactic Analysis (Parsing), Semantic interpretation, Discourse and pragmatic Processing, Text Classification. Discourse and pragmatic Processing, Implementation aspects of Syntactic Analysis (Parsing). <b>Robotics:</b> Fundamentals, path Planning for Point Robot, Sensing and mapping for Point Robot, Mobile Robot Hardware, Non Visual Sensors like: Contact Sensors, Inertial Sensors, Infrared Sensors, Sonar, Radar, laser Rangefinders, Biological Sensing.	9
VI	<b>Machine Learning:</b> Machine Learning Concepts, methods and models, Supervised Learning, unsupervised and semi-supervised, Learning Decision Trees, Evaluating and Choosing the Best Hypothesis, Artificial Neural Networks, Non-parametric Models, Support Vector Machines.	9

**Text Books:**

- 1) Artificial Intelligence: A Modern Approach by Peter and Norvig.
- 2) Stuart Russell and Peter Norvig (1995), Artificial Intelligence: A Modern Approach," Third edition, Pearson.

**Reference Books:**

1. .Shai Shalev-Shwartz, Shai Ben-David: Understanding Machine Learning from Theory to algorithms, Cambridge University Press
2. Michael Jenkin, Gregory, “Computational Principals of Mobile Robotics”, Cambridge University Press.
3. Artificial Intelligence by Elaine Rich, Kevin Knight and Nair, TMH
4. Deepak Khemani, “A First Course in Artificial Intelligence”, McGraw Hill Education (India).
5. Artificial Intelligence and Intelligent Systems by Padhy, Oxford University Press.

**Course Code** MCA19212**Course Name:** Data Warehousing and Data Mining**Credits** 4**Course Outcomes**

1. Understand the functionality of the various data mining and data warehousing components
2. Identifystrengths and limitations of various data mining and data warehousing models
3. Understand the analyzing techniques of various data
4. Understand different methodologies used in data mining and data ware housing.
5. Analyze different approaches of data ware housing and data mining with various technologies.
6. Understand the use and importance of different end user applications.

Units	Contents	Total Hrs
I	Introduction, Data mining, Data mining functions, classification and major issues. Data Preprocessing: Data cleaning, data integration and transformation, data reduction, discretisation & concept hierarchy generation.	10
II	<b>Data mining primitives:</b> Data mining primitives, data mining query language. Concept description: concept description, data generalization, Analytical characterization, mining class comparison.	9
III	<b>Application and trends in data mining :</b> data mining applications, data mining systems and research prototypes, additional themes on data mining, trends in data mining .	9
IV	Data ware house and OLAP Technology for data mining: What is data ware house, multidimensional data model, dataware house architecture, data ware house implementation.	10
V	<b>Data Staging:</b> overview, plan effectively, dimension table staging, fact table loads and ware house operations, data quality and cleansing, miscellaneous issues.	9
VI	<b>Building end user applications :</b> role of end user application, application specification, end user application development, maintaining and growing data ware house : manage the existing data ware house environment, prepare for growth and evaluation.	9

**Text Books :**

- 1) J. Han and M.Kamber: Data Mining Concepts and Techniques, Elsevier Pub. Indian Reprint, 2004.
- 2) R. Kimball: The Data Ware House Life Cycle Tool Kit, Wiley Press, John Wiley and Sons ASIA) Pvt. Ltd.

**Reference Books :**

- 1) Berson : Data Ware Housing, Data Mining and OLAP, Tata McGraw Hill.
- 2) Arun K. Pujari : Data Mining Techniques, University Press (Orient Longman)

**Course Code** MCA19213(01)

**Course Name:** COMPUTER GRAPHICS AND MULTIMEDIA

**Credits** 4

**Course Outcomes:**

1. Understand the core concepts of computer graphics, including viewing, projection, perspective, modelling and transformation in two dimensions.
2. Apply the concepts of colour models, lighting and shading models, textures, ray tracing, hidden surface elimination, anti-aliasing, and rendering.
3. Interpret the mathematical foundation of the concepts of computer graphics.
4. Know the fundamentals of animation, parametric curves and surfaces, and spotlighting.
5. Understand technical aspect of Multimedia Systems.
6. Understand the standards available for different audio, video and text applications and Data Compression Techniques.

Units	Contents	Total Hrs
I	<b>An overview of Computer Graphics and Graphics System:</b> Video display devices, Raster-Scan systems, Random-Scan systems, Graphics monitors and workstations, input devices, hard copy devices, Graphics software.	10
II	<b>Output Primitives :</b> Point and Lines, Line drawing algorithms, loading the frame buffer, line function, circle and ellipse generating algorithms, curves, parallel curves algorithms, Pixel addressing, filled-area primitives, functions, Cell array, character generation.	9
III	<b>2-D Geometric Transformations:</b> Basic transformations, matrix representations, composite transformations, other transformations, transformations between coordinate systems, affine transformations, and transformation functions, Raster methods for transformations. Two-Dimensional viewing: viewing coordinates, Window-to-viewport coordinate transformation, viewing functions, clipping: point, line, polygon, curve, and text, exterior. Projections.	9
IV	<b>Multimedia Authoring and Data Representations:</b> Introduction. Components of Multimedia. Hypermedia and Multimedia. Overview of Multimedia Software Tools, Multimedia Authoring, VRM. Graphics and Image Data Representations: 1- Bit Images, 8-Bit Gray-Level Images, 24-Bit Color Images, 8-Bit Color Images, Color Lookup Tables, Popular Image File Formats. Color in Image and Video Color Science, Color Models in Images, Color Models in Video	10
V	<b>Fundamental Concepts in Video:</b> Types of Video Signals, Component Video, Composite Video, S-Video, Analog Video, NTSC Video, PAL Video, SECAM Video, Digital Video. <b>Basics of Digital Audio:</b> Digitization of Sound, Digitization, Nyquist Theorem, Signal-to-Noise Ratio (SNR), Signal-to-Quantization-Noise Ratio (SQNR), MIDI: Musical Instrument Digital Interface. Hardware Aspects of MIDI, Structure of MIDI Messages, General MIDI, MIDI-to-WAV Conversion.	9
VI	<b>Multimedia Data Compression:</b> Lossless Compression Algorithms: Basics of Information Theory, Run-Length Coding, Variable-Length Coding, Dictionary-Based Coding, Arithmetic Coding, Lossy Compression Algorithms: Introduction, Distortion Measures, Quantization, Uniform Scalar Quantization, Non uniform Scalar Quantization, Image Compression Standard: The JPEG Standard.	9

**Text Books**

- 1) D. Hearn, M.P .Baker : Computer Graphics, II edition (Pearson Education)
- 2) Ze-Nian, Li, Mark S. Drew “Fundamentals of Multimedia” (Pearson Education)

### Reference Books

- 1) Rajan Parekh "Principles of Multimedia " (Tata McGraw-Hill)
- 2) F.S. Hill : Computer Graphics Using Open GL, II edition (Pearson Education)
- 3) W .M. Newman & R.F. Sproul : Principles of Interactive Computer Graphics, 2/e, (McGraw Hill)
- 4) F .S. Hill: Computer Graphics (Macmillan)
- 5) Harington : Computer Graphics (McGraw Hill)

<b>Course Code</b>	<b>MCA19213 (02)</b>
<b>Course Name</b>	<b>Cyber Security and Digital Forensic</b>
<b>Total Credits</b>	<b>4</b>

### Course Outcomes

1. Understand the concepts and foundations of CyberSecurity
2. Identify securityrisks
3. Ability to take preventivesteps
4. Investigate Cyber Crime and analysis ofevidences
5. Acquire knowledge of DigitalForensics

<b>Units</b>	<b>Contents</b>	<b>Total Hrs</b>
I	Cyber security concepts, Cyber security Strategy, Current Laws Involving Cyber security, International Comprehensive Cyber security Strategy, Cyber security Policy and StrategyEmerging Challenges, Cyber security, Need of Cyber securityMalwares: Viruses, Trojans, and Attacks, Development of Computer Viruses, Malicious Attacks	10
II	Threat Landscape, Attack Classification, Threat Attacks ,Botnets and Cyber Crime Applications , Different types of crimes, Deep Web , Vulnerabilities, Risk Assessment, and Risk Management, Random Stochastic Models ,issues of Time and Sequence , Attack Graphs , Cyber security vulnerabilities, Constraint and Simulations , Optimization and Risk.	9
III	Cyber Threat Spectrum—Cyberspace Attacks and Weapons, Cyber Threat Capability and Cyber Tools, Cyber Digital Arsenal , Rationale of Cyberspace Infrastructure Attacks Framework forImproving Critical Infrastructure Cyber security.	9
IV	Basics of Critical Infrastructure Protection ,Design and Utility of Infrastructures, Evolution of Infrastructures, Impact of Infrastructures on Society ,Random Nature of Faults, Failures, and Engineering Resilience, Fault Intolerance and Fault Tolerance, Fail-Safe.	10
V	Management Methods and Standards, Economic Impact on Regulation and Duties to Protect ,Legal Requirements and Regulations Critical Infrastructure Protection Strategies and Operations ,Physical Security ,Personnel Security, Operational Security Information Warfare Theory and ApplicationCost of Cyber security Contemporary Cost of Cyber Crime, Cyber security InsuranceNew Cyber security Models,FutureGenerations for Cyber security, Transformational Challenges	9
VI	Digital Forensics: Introduction of digital forensics, Need for digital forensics, Forensic process, Investigation, Digital evidence collection, Application , limitations, Legal considerations, Digital evidence, investigation tools.	9

### Reference Books

- 1) Cyber Security - Edited By Thomas A Johnson CRC Press.
- 2) CYBER SECURITY By Dr. Krishan Kumar Goyal, Prof Amit Garg
- 3) The NICE Cyber Security Framework: Cyber Security Intelligence and Analytics by IzzatAlsmadi

- 4) Computer Forensics and Digital Investigation with EnCase Forensic v7 By SuzanneWidup
- 5) Digital Forensics for Network, Internet and Cloud computing By Cunt PGarrison

**Course Code**                    **MCA19213 (03)**

**Course Name**                    **Visual Programming**

**Credits**                            **4**

**Course Outcomes :**

1. Understand the development and deployment cycles of enterprise applications.
2. Utilize the .NET framework to build distributed enterprise applications.
3. Develop ASP.NET Web Services, secure web services, and .NET remoting applications.
4. Understand the 3-tier software architecture (presentation/client tier, application tier, data tier) and develop multi-tier applications.
5. Understand and experiment with the deployment of enterprise applications.
6. Develop web applications using a combination of client-side and server-side JavaScript, HTML, HTML5, JQuery, AJAX ASP.NET, ADO.NET.
7. Develop network applications using state-of-the-art RPC technologies including: .NET remoting, and Web Services (SOAP).

Units	Contents	Total Hrs
<b>I</b>	<b>Introduction</b> , course mechanics, .NET Overview, CLR, Assemblies (monolithic vs. component-based applications), Execution Model, Client-Side vs. Server-Side Programming, Web Technologies, A Tour of the IDE	9
<b>II</b>	<b>Basics of Front end Technologies</b> :HTML, HTML5, JavaScript, jQuery, Need and Introduction of CSS, Creating new styles in External style sheets, Creating Embedded and Inline style sheets. <b>Introduction to Server Controls:</b> A Closer Look at ASP.NET Server Controls, Types of Controls, Standard controls, HTML controls, Data controls, Validation controls, Navigation controls, Login controls, Ajax Extensions, ASP.net State Engine..	10
<b>III</b>	<b>Introduction to Programming</b> : Data Types and Variables, Converting and Casting Data Types, Using Arrays and Collections, Statements: Operators, Making Decisions, Loops, Organizing Code : Methods- Functions, The App_Code Folder, Organizing Code with Namespaces, Writing Comments, Object Orientation Basics, Important OO Terminology, Events	9
<b>IV</b>	<b>Consistent Page Layout with Master Pages:</b> Creating Master Pages,Creating Content Pages, An Introduction to the ASP.NET Page Life Cycle, <b>Navigation:</b> Different Ways to Move around Your Site: Understanding Absolute and Relative URLs, Understanding Default Documents, Using the Navigation controls: Architecture of the Navigation Controls, Examining the Web.sitemap File, Using the Menu Control, Using the TreeView Control, Using the SiteMapPath Control, Programmatic Redirection: Programmatically Redirecting the Client to a Different Page, Server-Side Redirects <b>Validating User Input:</b> Gathering Data from the User:Validating User Input in Web Forms, Understanding Request Validation	10
<b>V</b>	<b>Introduction to ASP.NET AJAX:</b> The Timer Control, Using Web Services and Page Methods in Ajax Web Sites: What Are Web Services?, Creating Web Services, <b>An Introduction to jQuery:</b> Choosing the Location for Your jQuery Reference, Different Ways to Include the jQuery Library, Selecting Items Using jQuery, <b>Modifying the DOM with jQuery:</b> CSS Methods, Handling Events, Effects with jQuery.	9
<b>VI</b>	<b>Introduction to Database:</b> What Is a Database? Different Kinds of Relational Databases, Using SQL to Work with Database Data, Retrieving and Manipulating Data with SQL, Creating Your Own Tables, Data Types in SQL Server, Understanding Primary Keys and Identities, Creating Relationships Between Tables, Data Controls, Data Source and Data-bound Controls Working Together, Introducing Security in ASP.NET 4, <b>exception Handling, Debugging and Tracing, Deploying Your Web Site.</b>	9

**Course Code**                    **MCA19213 (04)**

**Course Name**                    **Cloud Computing**

**Credits**                            **4**

**Course Outcomes:**

1. Understand the core concepts of the cloud computing and its benefits along with its various models and services in cloud computing.
2. Use various types of Virtualization techniques using its open source tools.
3. Handle various types of cloud file systems.
4. Install cloud computing environments.
5. Manage various stages of SLA life cycle.
6. Identify various security threats and issues in cloud environments.

<b>Units</b>	<b>Contents</b>	<b>Total Hrs</b>
<b>I</b>	<b>Introduction to Cloud Computing</b> Introduction, Defining Cloud Computing, Understanding Cloud Architecture, Benefits of Cloud Computing SOA, Web services, Web 2.0, Mashups, Grid computing, Utility computing, Hardware virtualization, Essentials of Cloud characteristics, Challenges, Cloud economics, Role of Networks in Cloud Computing: Cloud types and service models, Primary Cloud Service models, Cloud Services brokerage, Primary cloud deployment models, cloud computing reference model, The greenfield and brownfield deployment options.	10
<b>II</b>	<b>Virtualization</b> Introduction, Understanding Abstraction & Virtualization Technologies, Virtualization, Types of Virtualization, Characteristics of Virtualized environments, Taxonomy of Virtualization techniques, Pros and Cons of Virtualization, Technology examples: Xen, KVM, Vmware, Microsoft Hyper-V, Load Balancing & Virtualization, Understanding Hypervisors, Defining Baseline and metrics, Baseline measurements, System metrics, Load testing, Resource ceilings, Servers and instance types, Network Capacity, Scaling.	9
<b>III</b>	<b>Storage in Cloud</b> Storage system architecture, Big data, Virtualize data center(VDC) architecture, VDC Environment, server, storage, networking, Virtual Machine Components and Process of converting physical to VMs, Block and file level storage virtualization, Virtual Provisioning, VLAN, VSAN and benefits, Network traffic management techniques in VDC, Cloud file systems: GFS and HDFS, BigTable, HBase and Dynamo. Features and comparisons among GFS, HDFS	9
<b>IV</b>	<b>Cloud computing platforms &amp; Standards</b> Infrastructure as Service, best-of breed cloud infrastructure components, cloud ready converged infrastructure, Anatomy of Cloud infrastructure, Distributed management of virtual infrastructure, scheduling techniques, SLA Commitment, Google Web Services, Amazon Web Services, Microsoft Cloud services. Cloud Computing Standards Objectives, Best Practices and Standards, Practical Issues- Interoperability, Portability, Integration, Security, Standards Organizations and Groups	10

- V      **Cloud monitoring and management**  
 Introduction and architecture for federated cloud computing, Performance prediction for HPC on Cloud. SLA management: Types of SLA, Life cycle of SLA, service catalog, cloud portal and its functions, cloud interface standards, system integration and workflow modeling, cloud service life-cycle phases: service planning, service creation, service operation, and service termination Control layer, its functions and benefits, element and unified manager, software defined approach and techniques for managing IT resources 9
- VI      **Security in Cloud Computing**  
 Introduction, Global Risk and Compliance aspects in cloud environments and key security terminologies, Data security risk, Cloud computing and identity, Digital identity and access management, Content level security, Securing the Cloud, Securing Data, Establishing Identity and Presence. Cloud Applications, Research trend in Cloud Computing, Fog Computing, Open Source and Commercial Clouds, Cloud Simulator 9

**Text Books:**

- 1) Barrie Sosinsky, "Cloud Computing", Wiley India.
- 2) Dr. Kumar Saurabh, "Cloud Computing", Wiley Publication.
- 3) Rajkumar Buyya, "Mastering Cloud Computing", Tata McGraw Hill.

**Reference Books:**

- 1) Greg Schulz, "Cloud and virtual data storage networking", CRC Press.
- 2) Anthony T. Velte, "Cloud Computing, A Practical Approach", TATA Mc Graw Hill
- 3) Pachghare V. K., "Cloud Computing", PHI Learning
- 4) Kailash Jayaswal, "Cloud computing", Black Book, Dreamtech Press.

**Course Code**                    MCA19214  
**Course Name**                    Open Elective  
**Credits**                            4

**Course Code**                    MCA19215  
**Course Name** Lab-10 Based on Client Server Computing  
**Credits**                            01

**Total Hrs** 15

**Course Outcomes**

1. Gain knowledge of Server Side programming by implementing Servlets and JSP.
2. Gain knowledge of J2EE architecture, MVC Architecture.
3. Distinguish Web Server, Web Container and Application Server, Serialization, Internationalization
4. Design and implement components like: Session, Java Beans, JSTL, Tag Extension and Filter.
5. Acquire knowledge of frameworks such as Struts and Hibernate
6. Distinguish between JDBC and Hibernate.
7. Design and Develop various application by Integrating any of Servlets, JSPs, Database, Spring, Hibernate by analyzing requirements and evaluating existing system.

The sample list of programs is given below. This list can be used as a guideline but the scope of the laboratory should not be limited to the same. Aim of the list is to inform about minimum expected outcomes.

1. (Use of JDBC) WAP TO:
  - a. Create a database using JAVA
  - b. Create a table, IN THE DATABASE
  - c. Insert records in the table

2. Update records in database table based on conditions
3. Display the records in database table based on conditions
4. Write a servlet program in Java that calls a stored procedure and displays the values returned by the stored procedure.
5. Create login form and perform state management using Cookies,
6. Perform state management using HttpSession
7. Create a registration form with validations using javascript
8. Create database of student subject-wise data and retrieve all data using JSP
9. Study and implement Hibernate
10. Study and Implement MVC using Struts
11. A mini project using all concepts

<b>Course code</b>	MCA19216
<b>Course Name</b>	Lab- 11 Based on Artificial Intelligence and Applications
<b>Credits</b>	<b>01</b>
<b>Total Hrs</b>	15
<b>Course Outcomes</b>	Skill to develop Artificial Intelligence, Robotics and Machine Learning Applications.

The following list can be used as guidelines for creating problem statements but the scope of the laboratory should not be limited to this list. Aim of the list to inform about minimum expected outcomes.

1. At least 6 Practical based on LISP language.
2. At least 6 Practical based on PROLOG Language.
3. Develop chat-bot application for enquiry purpose.
4. At least 1 practical based on implementation of Natural Language Processing using any of its open source tools.
5. Use any one open source robot simulation software and perform at least 1 program to demonstrate simulate robots (like line follower robot).
6. Practical to demonstrate the use of Machine Learning concept to classify any type of information based on facts as "real" or "fake".

<b>Course Code</b>	<b>MCA19217</b>
<b>Course Name</b>	<b>Lab-12 Based on Elective-4 (Computer Graphics and Multimedia)</b>
<b>Credits</b>	<b>2</b>
<b>Total Hrs</b>	<b>30</b>

**Course Outcomes:** Apply the core concepts of computer graphics and multimedia to real world problems  
Minimum Twelve practicals/experiments based on the respective syllabus, covering each of the units.

<b>Course Code</b>	<b>MCA19217</b>
<b>Course Name</b>	<b>Lab-12 Based on Elective-4 (Cyber Security and Digital forensic)</b>
<b>Credits</b>	<b>2</b>
<b>Total Hrs</b>	<b>30</b>
<b>Course Outcomes:</b>	Apply the concepts of CyberSecurity to real world problems

Minimum Twelve practical experiments based on the respective syllabus, covering each of the units.

<b>Course Code</b>	<b>MCA19217</b>
<b>Course Name</b>	<b>Lab-12 Based on Elective-4 (Visual Programming)</b>
<b>Credits</b>	<b>2</b>
<b>Total Hrs</b>	<b>30</b>

**Course Outcomes :**

1. Understand and the use of the development framework to build applications.
2. Develop web applications using a combination of client-side and server-side JavaScript, HTML, HTML5, JQuery, AJAX ASP.NET, ADO.NET.
3. Understand and experiment with the deployment of enterprise applications.

The sample list of program is given below. This list can be used as guide line for problemstatements but the scope of the laboratory should not be limited to the same. Aim of the list is to inform about minimum expected outcomes (recommended : C# language with ASP.NET)

1. Create and use the IDE for creating webform application
2. Create an informative website using HTML and HTML5
3. Createan informative website using HTML, HTML5, Java script and jQuery.
4. To Study and the use of different types of CSS.
5. Create an application using ASP.NET to use standard controls.
6. Create an application to study and use login controls and navigation controls.
7. Create an application to use ASP.NET to use arrays and different control structures.
8. Create an application to use Master pages ang navigate to other webpages.
9. Create an application using ASP.NET with AJAX.
10. Create an application using ASP.NET to study and use validation controls.
11. Create an application using ASP.NET to study and use of Function.
12. Create an application using ASP.NET to study and use of ADO.NET.

<b>Course code</b>	<b>MCA19217</b>
<b>Course Name</b>	<b>Lab-12 Based on Elective- 4( CLOUD COMPUTING LAB)</b>
<b>Credits</b>	<b>02</b>
<b>Total Hrs</b>	<b>30</b>

**Course Outcomes**

1. Develop Skill to use Cloudsim Tool to develop its Applications
2. AcquireSkill to develop applications using Hadoop Map/Reduce
3. Understand PAAS type applications
4. Ability to use Amazon, Microsoft Azure Web Services

The following list of can be used as guidelines for basic understanding but the scope of the laboratory should not be limited to this list. Aim of the list to inform about minimum expected outcomes.

1. Case Study: To study cloud architecture and cloud computing model

2. Installation and Configuration of virtualization using KVM.
3. A simple example showing how to create a datacenter with one host and run one cloudlet on it. (use Cloudsim Tool)
4. A simple example showing how to create two datacenters with one host and a network topology each and run two cloudlets on them. (use Cloudsim Tool)
5. An example showing how to create scalable simulations. (use Cloudsim Tool)
6. An example showing how to pause and resume the simulation, and create simulation entities (a DatacenterBroker in this example) dynamically. (use Cloudsim Tool)
7. Installation and Configuration of Hadoop.
8. Create an application (Ex: Word Count) using Hadoop Map/Reduce.
9. Case Study: PAAS(Facebook, Google App Engine)
10. Case Study: Amazon Web Services, Microsoft Azure

## Semester V

**Course Code**    MCA19301

**Course Name** Mobile Application Development

**Credits**            4

**Course Outcomes**

1. Identify various concepts of mobile programming that make it unique from programming for other platforms,
2. Critique mobile applications on their design pros and cons.
3. Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces.
4. Program mobile applications for the Android operating system that use basic and advanced phone features.
5. Deploy applications to the Android marketplace for distribution.

<b>Units</b>	<b>Contents</b>	<b>Total Hrs</b>
I	Introduction to Mobile A brief history of Mobile, The Mobile Ecosystem, Why Mobile?, Types of Mobile Applications, Mobile Information Architecture, Mobile Design, Mobile 2.0, Mobile Web development, Small Computing Device Requirements. J2ME: Overview The World of Java, Inside J2ME, J2ME Architecture, MIDlet Programming, J2ME Wireless Toolkit, Hello World J2ME Style, Multiple MIDlets in a MIDlet Suite.	10
II	Introduction to Android: History of Android, Introduction to Android, Operating Systems, Android Development Tools, Android Architecture.	9
III	Development Tools: Installing and using Eclipse with ADT plug-in, Installing Virtual machine for Android sandwich/Jelly bean (Emulator), configuring the installed tools, creating a android project – Hello Word, run on emulator, Deploy it on USB-connected Android device.	9
IV	User Interface Architecture: Application context, intents, Activity life cycle, multiple screen sizes User Interface Design: Form widgets, Text Fields, Layouts, Button control, toggle buttons, Spinners(Combo boxes), Images, Menu, Dialog.	10
V	Testing Android applications, Publishing Android application, Using Android preferences, Managing Application resources in a hierarchy, working with different types of resources. Understanding of SQLite database, connecting with the database.	9

Publishing and Distributing Android Applications : The Android Software Development Process, Assessing Project Risks, Writing Essential Project Documentation, Deploying Mobile Applications, Designing and Developing Bulletproof Android Applications.

**TEXT BOOKS:**

- 1) J2ME: The Complete Reference, James Keogh, Tata McGrawHill
- 2) Android application development for java programmers. By James C. Sheusi. Publisher: Cengage Learning, 2013.
- 3) Lauren Darcey and Shane Conder, —Android Wireless Application Development||, Pearson Education, 2nd ed. (2011)

**REFERENCE BOOKS:**

- 1) Reto Meier, “Professional Android 2 Application Development”, Wiley India Pvt Ltd
- 2) Mark L Murphy, “Beginning Android”, Wiley India Pvt Ltd
- 3) Android Application Development All in one for Dummies by Barry Burd, Edition: I

<b>Course Code</b>	<b>MCA19302</b>
<b>Course Name</b>	<b>SOFTWARE ENGINEERING</b>
<b>Credits</b>	<b>4</b>

**Course Outcomes**

1. Recognize evolving role of software project management.
2. Understand and estimate cost for software project.
3. Identify & analyze aspect in s/w to manage time, process & resources effectively with quality concept.
4. Estimate software productivity using metrics and indicator & identify important issues for planning a project
5. Judge different testing techniques used to test software.
6. Evaluate the role of user and software teams.

<b>Units</b>	<b>Contents</b>	<b>Total Hrs</b>
<b>I</b>	<b>Evolving role of Software.</b> Software crises & myths. Software engineering. Software process & process models : Linear sequential, prototyping, RAD, Evolutionary Product & Process. Project management concepts : People, Product, Process, Project. W5HH principle, critical practice.	10
<b>II</b>	<b>Measures, Metrics &amp; Indicators.</b> Metrics in process & project domains—software measurement, Metrics for software quality, small organization. Software projects Planning : Scope, resources, estimation, decomposition technique, Tools. Software risks : identification, risk projection, refinement & RMMM plan.	9
<b>III</b>	<b>Project Scheduling :</b> Concepts. Peoples Efforts. Task set, Task network. Scheduling. EV analysis, Project Plan. Software quality concepts. SQ Assurance, Software reviews, technical reviews, software reliability, ISO 900 L, SQA Plan. SCM process. Version control. SCM standard.	9
<b>IV</b>	<b>System Engineering:</b> Hierarchy, Business Process & Product engineering : Overviews. Requirement engineering, System modeling. Requirement analysis. Analysis principles. Software prototyping. Specification. Design Process. Design Principles & Concepts. Effective modular design. Design model & documentation.	10
<b>V</b>	<b>Software architecture :</b> Data Design, Architectural styles, Requirement mapping. Transform & Transaction mappings. User-interface design : Golden Rule. UTD, Task analysis & modelling, ID activities, Tools, design evaluation. Component level design : Structure programming, Comparison of design notation	9
<b>VI</b>	<b>Software Testing Fundamentals ;</b> test case design, Whitebox testing. Basis path, control structure-, Blackbox-Testing, & for specialized environments. Strategic approach to S/W	9

- 1) Distributed Systems, Andrew S.Tanenbaum, Maarten Van Steen, Third Edition, Pearson Education

**Reference Books:**

- 1) Distributed Systems, Concepts and Design, George Coulouris, J Dollimore and Tim Kindberg, Pearson Education
- 2) Distributed Systems, An Algorithm Approach, Sikumar Ghosh, Chapman & Hall/CRC, Taylor & Francis Group
- 3) Distributed Computing: Principles, Algorithms, and Systems, Ajay D. Kshemkalyani, Mukesh Singhal, Cambridge University Press
- 4) Principles of Distributed Systems, VK Garg, Kluwer Academic Publishers
- 5) Distributed Systems and Algorithmic Approach, Su Kumar Boss, Chamal & Hall

**Course Code** MCA19304(01)

**Course Name** Data Analytics

**Total Credits** 4

**Course Outcomes**

At the end of the course, the students will be able to:

1. Develop and maintain reliable, scalable systems using Apache, HADOOP
2. Write Map Reduce based application
3. Differentiate between conventional SQL and NoSQL
4. Analyze and develop Big Data solutions using HIVE and PIG

Units	Contents	Total Hrs
I	<b>Introduction</b> Distributed file system and its issues, Introduction to big data, big data characteristics, types of big data, traditional vs. big data approach, big data applications	10
II	<b>Hadoop</b> Why Hadoop? Hadoop architecture, Hadoop components HDFS and YARN, comparison between YARN 1 and YARN 2 architecture, HDFS federation : Name Node, Data Node, Resource Manager, Job Tracker, Task Tracker <b>Hadoop Ecosystem</b> : Scoop, HIVE, PIG, Flume, Zookeeper, HBASE <b>Hadoop installation in pseudo distribution mode, running HDFS Commands</b>	9
III	<b>Map Reduce</b> Understanding Map Reduce, Map Task, Reduce Task, speculative execution, partitioner and combiner in Map Reduce <b>Running sample Map Reduce Program: Word Count.</b> Algorithm using Map Reduce :-matrix vector multiplication, -grouping and aggregation-relational algebra operations	9
IV	<b>NoSQL</b> What is NoSQL? NoSQL - Case study, data architecture pattern: key value, column family, document store. HBASE overview, HBASE data model, row oriented vs. column oriented storage, HBASE architecture, HBASE shell commands	10
V	<b>HIVE</b> : background, architecture, warehouse directory and meta-store, HIVE query language, loading data into table, HIVE built-in functions, joins in HIVE, HIVE installation, HiveQL: querying data, sorting and Aggregation	9
VI	<b>PIG</b> : background, architecture, PIG Latin Basics, PIG execution modes, PIG processing – loading and transforming data, PIG built-in functions, filtering, grouping, sorting data <b>Installation of PIG and PIG Latin commands</b>	9

**Reference Books**

- 1) Tom White, "HADOOP: The definitive Guide", O Reilly 2012
- 2) Chris Eaton, Dirk deRoos et al., "Understanding Big Data", McGraw Hill, 2012.
- 3) Big Data Analytics – RadhaShankarmani and M. Vijayalakshmi Wiley Textbook Series
- 4) Hadoop in Action - Chuck Lam Dreamtech Press
- 5) Hadoop in Practice - Alex Holmes Dreamtech Press

**Course Code**                    **MCA19304(02)**

**Course Name**                    **Bio-Informatics**

**Credit**                            **4**

**Course Outcomes**                    -

1. Understand Biologists need of information in digital form for correct and meaningful interpretation.
2. Apply knowledge of Data mining and detail study of Genome analysis using different tools and databases.
3. Detail study of Gene Identification and prediction methods for micro analysis.
4. Apply knowledge of Protein and proteomics tools techniques as visualization methods in biological environment.
5. Understand knowledge of computational methods, biological system and pathways.
6. Illustrate the concept of drug discovery and implementation of bioinformatics applications.

Units	Contents	Total Hrs.
<b>I</b>	<b>Introduction</b> Historical overview and definition, bioinformatics applications, major databases in bioinformatics, data management and analysis, central dogma of molecular biology	<b>10</b>
<b>II</b>	<b>Data mining and Genome analysis</b> Tools for web search, data retrieval tools, data mining of biological databases, genome analysis, genome mapping, genetic mapping and linkage analysis, the human genome project	<b>9</b>
<b>III</b>	<b>Gene Identification and Prediction</b> Basis of gene prediction, pattern recognition, gene prediction methods, gene prediction tools, DNA microarrays, data sources and tools for microarray analysis	<b>9</b>
<b>IV</b>	<b>Protein and Proteomics</b> Overview of the protein structure, protein structure visualization, structure-based protein classification, protein structure visualization databases and tools, tools and techniques in proteomics, protein-protein interaction, methods of gene family identification.	<b>10</b>
<b>V</b>	<b>Computational methods for Pathways and systems Biology</b> Analysis of pathways, metabolic network properties, metabolic control analysis, biological markup languages, application of computer in biology, molecular biology and bioinformatics	<b>9</b>
<b>VI</b>	<b>Drug Discovery and Bioinformatic applications</b> Areas influencing drug discovery, pharmacogenetics and pharmacogenomics applications, analysis of single nucleotide polymorphisms, important parameters of drug discovery, Application of bioinformatics in various different fields like biotechnology, drug development, gene therapy etc	<b>9</b>

**Text Book:**

1. Bioinformatics, Methods and Applications by S.C. Rastogi, N. Mendiratta, P. Rastogi  
Tata McGraw-Hill India ISBN 81-203-3062-5

**Reference Books:**

1. Introduction to Bioinformatics by Arthur M. Lesk OXFORD university press ISBN 10-0-19-568525-3
2. Bioinformatics Computing by Bergeron Bryan **Prentice-Hall of India Private Limited**  
ISBN :81-203-2258-4
3. Fundamental Concepts of Bioinformatics by Dan E. Krane and Michael L. Raymer Pearson Education  
ISBN 81-7758-757-9

**Course Code**                    **MCA19304(03)**

**Course Name**                    **Game Programming**

**Credit**                            **4**

**Course Outcomes**

1. write survey on the gamification paradigms.
2. Solve problems using gamification and open source tools.
3. solve problems for multi-core or distributed, concurrent/Parallel environments

<b>Units</b>	<b>Contents</b>	<b>Total Hrs</b>
I	<b>Introduction:</b> Game Programming, Development Process of Game Programming, Programming languages used to develop, APIs and Libraries for Graphic APIs and other, Game structure.	10
II	<b>3d Graphics For Game Programming:</b> Coordinate Systems, Ray Tracing, Modeling in Game Production, Vertex Processing, Rasterization, Fragment Processing and Output Merging, Illumination and Shaders, Parametric Curves and Surfaces, Shader Models, Image Texturing, Bump Mapping, Advanced Texturing, Character Animation, Physics-based Simulation	9
III	<b>Game Design Principles:</b> Character development, Story Telling, Narration, Game Balancing, Core mechanics, Principles of level design, Genres of Games, Collision Detection, Game Logic, Game AI, Path Finding	9
IV	<b>Gaming Engine Design:</b> Renderers, Software Rendering, Hardware Rendering, and Controller based animation, Spatial Sorting. Game engines - Adventure Game Studio, DXStudio.	10
V	<b>Gaming Platforms And Frameworks:</b> Flash, DirectX, OpenGL, JAVA, Python, XNA with Visual Studio, Mobile Gaming for the Android, iOS,	9
VI	<b>Game Development:</b> Developing 2D and 3D interactive games using OpenGL, DirectX – Isometric and Tile Based Games, Puzzle games, Single Player games, Multi-Player games.	9

- 5) Jason Gregory, “Game Engine Architecture”, A K Peters, 2009.
- 6) Jeannie Novak, “Game Development Essentials”, 3rd Edition, Delmar Cengage Learning, 2011.

**Course Code**                    **MCA19304(04)**

**Course Name**                    **Internet of Things**

**Credit**                            **4**

## Course Outcomes

At the end of the course, the students will be able to

1. Identify the use of IoT from a global context.
2. Design application using IoT.
3. Analyze the IoT enabling Technologies
4. Determine the real world problems and challenges in IoT .

Units	Contents	Total Hrs
I	<b>IoT Architecture</b> – State of the ArtIntroduction,State of the art, Architecture Reference Model, Introduction, Reference model and architecture, IoT reference model, IoT Reference Architecture,Introduction, Functional view, Information view, Deployment andoperational view, Other relevant architectural views	10
II	<b>IoT Enabling Technologies</b> - Wireless Sensor Networks ,CloudComputing ,BigData Analytics,Communication Protocols,Embedded Systems	9
III	<b>Real-World Design Constraints</b> -Introduction,Technical design Constraints– hardware ,Data representationandvisualization,Interaction and remote control	9
IV	<b>Open – Source Prototyping Platforms for IoT</b> - Basic ArduinoProgramming Extended Arduino Libraries,Arduino – BasedInternet Communication, Raspberry PI,Sensors and Interfacing	10
V	<b>Data Management</b> , Business Process in IoT, IoT Analytics,Creative Thinking Techniques, Modification,CombinationScenarios, Decentralized and Interoperable ,Approaches, Object – Information Distribution,Architecture, Object Naming Service(ONS), Service Oriented Architecture, Network of Information,	9
VI	<b>Domain specific</b> Home Automation - Smart Lighting ,SmartAppliances , Intrusion Detection , Smoke/Gas Detectors Energy-Smart Grids ,Renewable Energy Systems ,Prognostics Health & Lifestyle -Health & Fitness Monitoring ,Wearable Electronics ,Agriculture - Smart Irrigation ,Green House Control ,Retail- Inventory Management , Smart Payments ,Smart Vending Machines , Cities -Smart Parking ,Smart Lighting ,Smart Roads ,Structural Health Monitoring ,Surveillance ,Emergency Response	9

- 3) Getting Started with the Internet of Things by CunoPfister
- 4) The Internet of Things: Connecting Objects by HakimaChaouchi
- 5) FrancisdaCosta, “Rethinking the Internet of Things: A Scalable Approach to Connecting Everything”, 1<sup>st</sup> Edition, Apress Publications, 2013

<b>Course Code</b>	<b>MCA19306</b>
<b>Course Name Lab 13</b>	<b>Based on Mobile Application Development</b>
<b>Credits</b>	<b>1</b>
<b>Total Hrs</b>	<b>15</b>
<b>Course Outcomes</b>	<b>Skill of Mobile Application Development using Android Studio Development tool.</b>

The following list of can be used as guidelines for basic understanding but the scope of the laboratory should not be limited to this list. Aim of the list is to inform about minimum expected outcomes

1. Add two Edit Text. When a number is entered in Edit Text 1, the square of that number should be displayed in Edit Text 2.
2. Add an Edit Text and a button. When the button is clicked, the text inputted in Edit Text should be retrieved and displayed back to the user
3. Add two Edit Text and a button. When the button is clicked, the text inputted in Edit Text 1 should be retrieved and displayed in EditText2.
4. Program a calculator
5. Create a Unit convertor for height
6. Create a Unit convertor for height and weight in the same application. Selection of height/weight can be done using a spinner.
7. Add a spinner. When the spinner is selected, there should be three options (e.g., android, java, testing). When you click on each option, it should go to another page containing some other components. Each of these pages should have a “back” button, which on pressing will take you back to the page with the spinner.
8. Create applications to include Action Bar, Menus, Dialogs and Notifications.
9. Create a user login form and registration form. First time users have to register through the registration form and the details should be stored in the database. Then they can login using the login page.
10. Create a camera application, where you can click a picture and then save it as the wallpaper.
11. Create a media player which plays an mp3 song.
12. Create a media recorder which will record the sound.

<b>Course Code</b>	<b>MCA19307</b>
<b>Course Name</b>	<b>Lab 14 Distributed Systems</b>
<b>Credits</b>	<b>1</b>
<b>Total Hrs</b>	<b>15</b>

**Course Comes:** Apply the principles and architectures in distributed systems

Minimum Twelve practicals/experiments must be completed based on the respective syllabus covering each of the units.

Sr. no List of the practicals not limited to the following:

1. Write a program to determine class, Network and Host ID of the node address using software tool
2. Program to implement process synchronization
3. Write a program to implement Interprocess Communication
4. Practical to demonstrate the Remote Procedure call RPC
5. Practical to demonstrate the Parameter Passing
6. Practical based on demonstration of advanced transient messaging
7. Practical based on implementation of mutual exclusion algorithms
8. Practical based on implementation of Election algorithms
9. Write the programs for Recovery Oriented Programming
10. Write a program to create one or more grid users
12. Write a program to create Gridlets and send them to a grid resource entity
11. Write a program to show how to keep message logging
13. Programs demonstrating flooding based multicasting
14. Write a program to demonstrate how to connect two Grid entities using a link.
15. Write a program to netuser entity sends messages to test entity and test entity sends back these messages
16. Implement the program for data security through cryptographic methods
17. Implement the program to check the authenticity
18. Write the program to check the Data Integrity

<b>Course Code</b>	<b>MCA19308</b>
<b>Course Name</b>	<b>Lab 15 Based on Data Analytics</b>
<b>Credits</b>	<b>2</b>
<b>Total Hrs</b>	<b>30</b>

**Course Outcomes**

1. Write Map Reduce based applications
2. Analyze and develop Big Data solutions using HIVE and PIG

Minimum Twelve practicals / experiments must be completed based on the respective syllabus covering each of the units.

<b>Course Code</b>	<b>MCA19308</b>
<b>Course Name</b>	<b>Lab15 - Based on Bio-Informatics</b>
<b>Credit</b>	<b>02</b>
<b>Total Hrs</b>	<b>30</b>
<b>Course Outcomes</b>	Skill of effective use of Database search tools and computational methods.

The following list can be used as guideline for creating problem statements but the scope of the laboratory should not be limited to this list. Aim of the list is to inform about minimum expected outcomes.

1. Literature databases (searching & downloading).
2. Perform any two techniques of Protein and proteomics as visualization methods.
3. Protein sequence databases PIR-PSD
4. Database searches: Sequence comparisons & alignment
5. Exploring EMBOSS series .
6. Sequence comparisons & alignment
7. Case study on Visualisation & Bio-Informatics Applications.

<b>Course code</b>	<b>MCA19308</b>
<b>Course Name</b>	<b>Lab-15 Based on Elective- 5 (GAME PROGRAMMING LAB)</b>
<b>Credits</b>	<b>02</b>
<b>Total Hrs</b>	<b>30</b>
<b>Course Outcomes</b>	<b>Skill to develop Game Programming.</b>

The following list of can be used as guidelines for basic understanding but the scope of the laboratory should not be limited to this list. Aim of the list to inform about minimum expected outcomes.

1. Case study to define Game Structure
2. To develop any one 3D graphics for game programming using any one of its open source development tool.
3. To develop program on any one type of Game Logic (Like Collision Detection, etc.)
4. Use Adventure Game Studio/DXStudio and develop any application of its type.
5. Case study on OpenGL.
6. To develop any one 2D or 3D interactive small game using any one of its open source framework.

<b>Course Code</b>	<b>MCA19308</b>
<b>Course Name</b>	<b>Lab 15 Based on Internet of Things</b>
<b>Credits</b>	<b>2</b>
<b>Total Hrs</b>	<b>30</b>
<b>Course Outcomes</b>	Design IoT based application

Minimum Twelve practicals / experiments must be completed based on the respective syllabus covering each of the units.

## SEMESTER VI

<b>Course code</b>	MCA19310
<b>Course Name</b>	Industry Project and Internship/Startup
<b>Credits</b>	18

<b>Course code</b>	MCA19309
<b>Course Name</b>	Seminar/Presentation
<b>Credits</b>	06
